Flow Chart

## Introduction

The Dynabloc geared servo motor range from Leroy-Somer combines reduced-backlash Dynabloc gearboxes with high-performance Unimotor servo motors to provide optimized solutions for all servo applications. There are two families of Dynabloc gearbox: Dynabloc Low Backlash and Dynabloc Standard Backlash.

### Dynabloc Low Backlash

**Planetary Gearboxes**

**Pje Dynabloc**

**Pjr Dynabloc**

**Worm Gearbox**

**Mjd Dynabloc**

**LOW BACKLASH**

### Dynabloc Standard Backlash

**Helical Gearbox**

**Cb Dynabloc**

**Helical Bevel Gearbox**

**Ot Dynabloc**

**Worm Gearbox**

**Mb Dynabloc**

**STD BACKLASH**

### Unimotor fm and hd Servo Motors

**Flexible Motor**  
Continuous Duty Applications

**Unimotor fm**

**High Dynamic Motor**  
Pulse Duty Applications

**Unimotor hd**

### Overview of Dynabloc-Unimotor combinations

Motor type	Dynabloc Low Backlash			Dynabloc Standard Backlash		
	Pje	Pjr	Mjd	Cb	Ot	Mb
Unimotor fm	✓	✓	✓	✓	✓	✓
Unimotor hd	✓	✓	✓	-	-	✓ <small>Mb41, Mb42 only</small>

## Servomotors technical data

Temperature rise class F

Ambiant temperature 40°C

Power supply 380-480 V AC (230 V on request)

Nominal speed 2000 to 6000 rpm

Servomotor type	Stall torque <i>N.m</i>	Nominal torque <i>N.m</i>	Peak torque* <i>N.m</i>	Standard inertia $10^{-4} \text{ kg.m}^2$	High inertia $10^{-4} \text{ kg.m}^2$	Brake		Supply <i>V (Vdc)</i>	
						Static torque <i>N.m</i>	Inertia $10^{-4} \text{ kg.m}^2$		
Unimotor fm	075 U3 B	2.7	2.5	8.0	1.22	1.61	2.2	0.07	24
	095 U3 B	4.5	4.3	13.5	2.60	4.5	12.2	0.39	24

	115 UD D	18.8	15.6	56.4	8.38	-	20	0.21	24
	142 UD C	25.0	22.3	74.9	17.0	-	42	1.85	24
	142 UD E	38.0	31.7	114	27.2	-	42	1.85	24
	190 UD C	52.0	46.2	156	54.6	-	67	4.95	24

\* The peak torque can be limited by put current of the drive.

For all the safety instructions, general information and technical characteristics relating to the servo motors Unimotor fm and hd, refer to the Servo Drives and Motors catalogue ref: P.N. 0702-0007-09 07/16.

## Angular backlash of the gearboxes

The backlash in the gearbox output shaft varies from 1 to 30 arcmin depending on the chosen gearbox type and backlash class. The possible selections are as follows:

Backlash class		Low speed shaft orientation			
		Axial		Perpendicular	
		Type	Backlash	Type	Backlash
Low Backlash	BASIC	Pje i = 3 - 10	< 8 - < 10'	Mjd	< 10'
		Pje i = 12 - 100	< 12 - < 14'		
	MEDIUM	Pjr i = 3 - 10	< 4 - < 6'		< 5'
		Pjr i = 12 - 100	< 6 - < 7'		
	EXPERT	Pjr i = 3 - 10	< 2 - < 4'*		< 1'
		Pjr i = 12 - 100	< 4 - < 5'*		
Standard Backlash		Cb	10 - 30'	Ot Mb	10 - 30'

The exact backlash for each gearbox type and ratio i is specified in § Technical characteristics.

## Torsional stiffness

The torsional stiffness is the characteristic which indicates the torque in N.m which must be applied to the servo gearbox to deform it by an angle of one arcmin. The stiffness is indicated in N.m/arcmin.

In the event of very severe applications combined with a high inertia of the load, it is advisable to choose a servo gearbox with high torsional stiffness in order to guarantee the stability of the servomotor at dynamic operation.

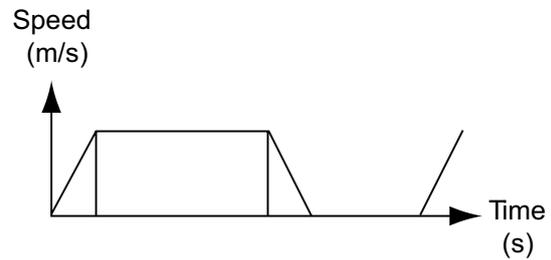

The proposed planetary gearboxes Pje and Pjr or worm gearboxes Mjd are most suitable under these conditions.

## Finite reduction ratios

In the Dynabloc range, all reduction ratios are finite numbers or integers to enable a precise calculation of the positioning, without rounding (Exceptions: Dynabloc Cb and Ot).

## Necessary information for gearbox selection

- Type of application
- Weight of load to be moved
- Duty cycle, see diagram below (example)
- Linear speed
  - > Calculate the speed  $n_2$  at the gearbox output
- Accuracy of positioning
  - > Calculate the angular backlash of the gearbox
- Resistive and acceleration torque at output
- Radial and axial load on output shaft
- Ambient temperature
- Height of installation

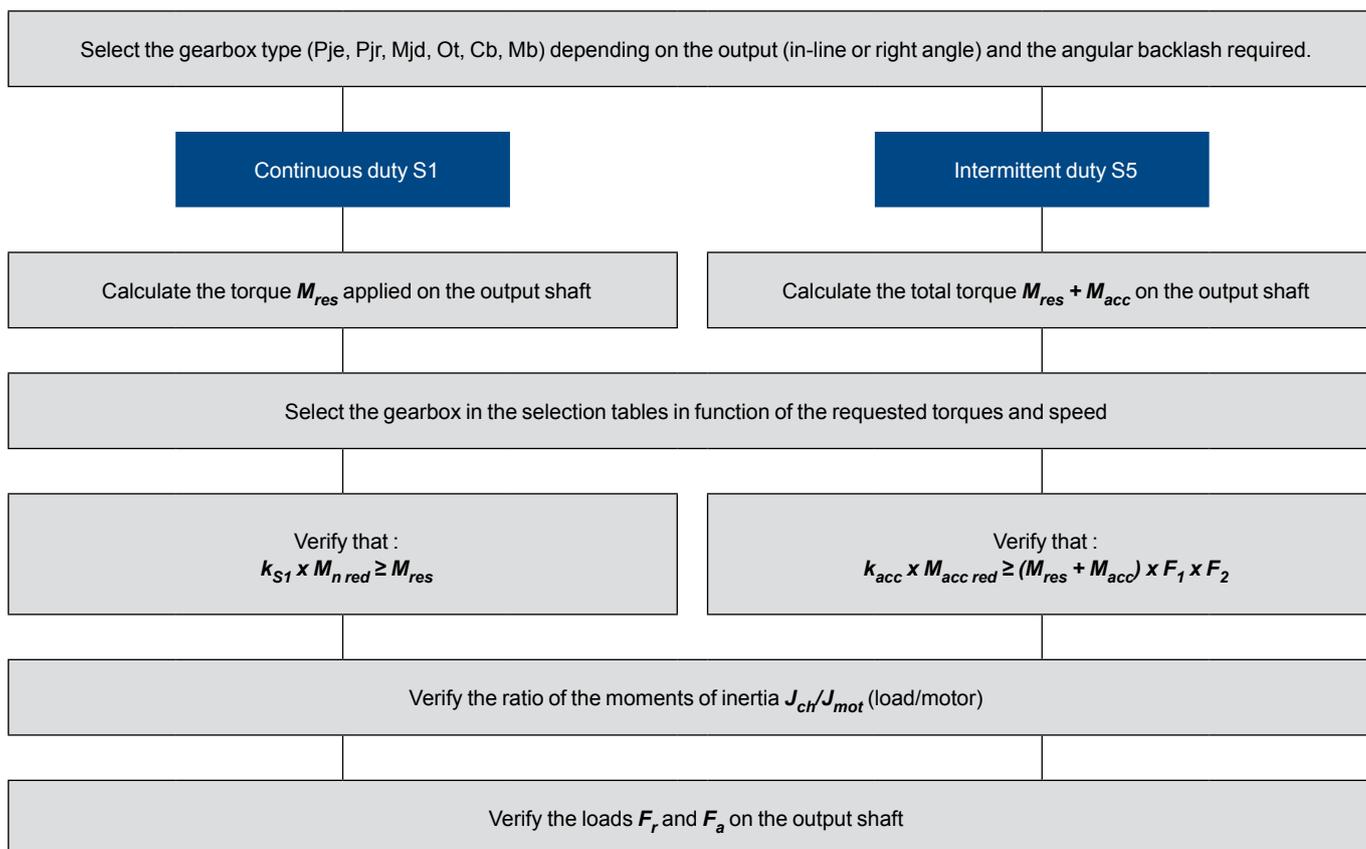

Duty cycle diagram

### Abbreviations

Definitions	Symbols
Maximum permissible gearbox output torque for S1 Duty in N.m (optimum case)	$M_{Red-S1\ max}$
Motor nominal torque in N.m	$M_{n\ mot}$
Motor peak torque in N.m	$M_{peak\ mot}$
Gearbox nominal output torque in N.m	$M_{n\ red}$
Acceleration torque at gearbox output in N.m	$M_{acc\ red}$
Requested acceleration torque in N.m	$M_{acc}$
Resistive torque of the load at gearbox output in N.m	$M_{res}$
Duty factor for S1 Duty	$k_{S1}$
Duty factor at acceleration	$k_{acc}$
Motor inertia in kg.m <sup>2</sup>	$J_{mot}$
Gearbox inertia at input in kg.m <sup>2</sup>	$J_{red}$
Inertia of load, in kg.m <sup>2</sup> , at gearbox input	$J_{ch}$
Exact gearbox ratio	$i_{exact}$
Output speed in rpm	$n_2$
Maximum permissible radial load on output shaft in N	$F_r$
Maximum permissible axial load on output shaft in N	$F_a$

### Selection flow chart

#### Correction factors

Factor F1					
Running time per cycle	10 %	30 %	50 %	70 %	90 %
Corrective factor F1	0.7	0.85	1	1.11	1.2

Factor F2				
Number of starts per hour	1000-2000	2000-3000	3000-5000	5000-10000
Corrective factor F2	1 - 1.3	1.3 - 1.5	1.5 - 1.7	1.7 - 1.9

#### Indicative values for the ratio of inertias $J_{ch}/J_{mot}$

Acceleration time	Ratio $J_{ch}/J_{mot}$
0.1 s	$\leq 3$
0.2 s	$\leq 5$
0.5 s	$\leq 8$
1.0 s	$\leq 15$

## Pje Dynabloc Servo gearbox General

### Pje Dynabloc

• An economical reduced backlash planetary solution

- Low backlash
- High torsional stiffness
- Lightweight and compact
- Unimotor fm or hd

LOW BACKLASH

Pje Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Pje Dynabloc gearboxes are the perfect economical solution for applications requiring low backlash and high torsional stiffness. Lightweight and compact, the gearboxes can be easily integrated into machines. Maintenance-free, they are supplied lubricated and are multipositional.

Pje Dynabloc gearboxes are available with Unimotor fm motors for continuous duty applications with high inertia loads or Unimotor hd motors for pulse duty applications requiring high dynamics. Standard motor speed is 3000 rpm, a motor speed of 6000 rpm is also available for the smallest sizes.

Description	
Range	4 sizes from 0641 to 1502
Nominal torque	20 - 340 N.m
Max acceleration torque	Up to 460 N.m
Gearbox ratio	1-stage: ratios from 3 to 10 2-stage: ratios from 12 to 70
Backlash	BASIC • 1-stage: 8 to 10' • 2-stage: 12 to 14'
Lubrication	Life lubricated, multiposition
Efficiency	1-stage: 94 % 2-stage: 92 %
Output shaft	Solid shaft with key
Unimotor hd Unimotor fm	Nominal speed 2000 rpm to 6000 rpm depending on size Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Universal mounting with servo coupling
Finish	Painted (RAL 9005 black) and unpainted aluminium

The maximum temperature on the housing must not exceed 90°C.

\* If  $k_{acc} < 1$ , the acceleration torque must be reduced by limiting the current through the drive.

## Pjr Dynabloc Servo gearbox General

### Pjr Dynabloc

• A high performance planetary solution

- Very low backlash
- Very high torsional stiffness
- High overload capacity
- Lightweight and compact
- Unimotor fm or hd

LOW BACKLASH

Pjr Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Pjr Dynabloc gearboxes are the perfect solution for servo applications requiring the highest performance. They provide very low backlash and very high torsional stiffness and have a high overload capacity. Lightweight and compact, the gearboxes can be easily integrated into machines. Maintenance-free, they are supplied lubricated and are multipositional.

Pjr Dynabloc gearboxes are available with Unimotor fm motors for continuous duty applications with high inertia loads or Unimotor hd motors for pulse duty applications requiring high dynamics. Standard motor speed is 3000 rpm, a motor speed of 6000 rpm is also available for the smallest sizes.

Description	
Range	5 sizes from 0601 to 1802
Nominal torque	26 - 600 N.m
Max acceleration torque	Up to 1300 N.m
Gearbox ratio	1-stage: ratios from 3 to 10 2-stage: ratios from 12 to 70
Backlash	MEDIUM • 1-stage: 4 to 6' • 2-stage: 6 to 7' EXPERT • 1-stage: 2 to 4' • 2-stage: 4 to 5'
Lubrication	Life lubricated, multiposition
Efficiency	1-stage: 96 % 2-stage: 94 %
Output shaft	Solid shaft with key
Unimotor hd Unimotor fm	Nominal speed 2000 rpm to 6000 rpm depending on size Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Universal mounting with servo coupling
Finish	Painted (RAL 9005 black) and unpainted aluminium

## Mjd Dynabloc Servo gearbox General

### Mjd Dynabloc

• A high efficiency and precision worm solution

- Very low backlash
- Very high torsional stiffness
- High efficiency worm
- Space-saving right angle design
- Quiet operation
- Unimotor fm or hd

LOW BACKLASH

Mjd Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Mjd Dynabloc gearboxes are the perfect solution for high precision applications. The high efficiency worm gear provides very low backlash and very high torsional stiffness with quiet operation. The gearboxes also offer multiple possibilities of mounting helping to save space and facilitate easy integration:

- Compact right angle design
- Fixing possible on four sides as standard.
- Solid output shaft single or double or hollow shaft keyed or with shrink disc.

Maintenance-free, the gearboxes are supplied lubricated.

Mjd Dynabloc gearboxes are available with Unimotor fm motors for continuous duty applications with high inertia loads or Unimotor hd motors for pulse duty applications requiring high dynamics. Standard motor speed is 3000 rpm, a motor speed of 6000 rpm is available on demand.

Description	
Range	7 sizes from 035 to 110
Nominal torque	23 - 688 N.m
Max acceleration torque	Up to 1100 N.m
Gearbox ratio	Ratios from 5.2 to 90
Backlash	BASIC: 10' MEDIUM: 5' EXPERT: ≤ 1'
Lubrication	Life lubricated
Efficiency	Depending on ratio (see chapter Mjd Technical characteristics, page 41)
Output shaft	Plain shaft with key, simple or double • Tolerance h6, threaded hole acc. to DIN 332 DR form Keyed hollow shaft or unkeyed with shrink disk • Tolerance of diameter: H7
Unimotor hd Unimotor fm	Nominal speed 3000 rpm (except 190 UD) Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Universal mounting with servo coupling
Finish	Painted (RAL 9005 black) and unpainted aluminium

## Cb Dynabloc Servo gearbox

### In-line output shaft

### General

#### Cb Dynabloc

- A high efficiency solution for standard backlash applications

- High efficiency
- Compact size
- Rugged design
- Integrated mounting
- Unimotor fm

Cb Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Cb Dynabloc gearboxes provide a high-efficiency solution for applications requiring standard backlash. The helical gearboxes are compact and robust thanks to their rugged design and integrated servo motor mounting.

Cb Dynabloc gearboxes are fitted with Unimotor fm motors, making them ideal for continuous duty applications with high inertia loads. Standard motor speed for D+20 lead time is 3000 rpm.

STD BACKLASH

Description	
Range	5 sizes from 3031 to 3433
Gearbox ratio	Ratios from 3 to 104
Nominal torque	Up to 1590 N.m
Backlash	STANDARD: 10 to 30 min, depending on sizes and ratio
Lubrication	Supplied with ISO VG220 mineral oil, depending on operating position
Efficiency	~ 95 %
Output shaft	Solid shaft + key Tolerance of diameters in accordance with NFE22-051 and ISO R 775 Key ISO R 773
Unimotor fm	Nominal speed 3000 rpm Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Integrated mounting
Finish	Painted (RAL 9005 black) (Except Cb30: unpainted aluminium)

## Ot Dynabloc Servo gearbox Right angle integrated mounting output shaft General

### Ot Dynabloc

- A high efficiency right angle solution

- High efficiency
- Space-saving right angle design
- Rugged design
- Integrated mounting
- Unimotor fm

STD BACKLASH

Ot Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Ot Dynabloc bevel gearboxes provide a high efficiency solution for applications requiring standard backlash. The gearboxes offer advantages in terms of space saving and ease of integration thanks to their right angle design and integrated servo motor mounting. A variety of mounting positions and shafts are available.

Ot Dynabloc gearboxes are available with Unimotor fm motors for continuous duty applications with high inertia loads. Standard motor speed for D+20 lead time is 3000 rpm.

Description	
Range	5 sizes from 3132 to 3533
Gearbox ratio	Ratios from 5 to 101
Nominal torque	Up to 2575 N.m
Backlash	STANDARD : 10 to 30', depending on sizes and ratio
Lubrication	Supplied with ISO VG 220 mineral oil, depending on operating position
Efficiency	~ 95 %
Output shaft	Hollow or solid shaft with key or hollow shaft and shrink disk Tolerances of diameter NFE22-051 and ISO R 775 Key ISO R 773
Unimotor fm	Nominal speed 3000 rpm Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Integrated mounting
Finish	Painted (RAL 9005 black)

## Mb Dynabloc Servo gearbox Right angle output shaft General

### Mb Dynabloc

- An economical worm solution for quiet operation

- Compact size
- Space-saving right angle design
- Quiet operation
- Universal mounting
- Unimotor fm and hd

Mb Dynabloc servo gearboxes are designed to reduce the speed and increase the torque of servo motors and to optimize the ratio of inertia between the driven load and the motor.

Mb Dynabloc worm gearboxes provide an economical solution with quiet operation. The gearboxes offer advantages in terms of space saving and ease of integration thanks to their compact size, right angle design and universal mounting.

The models Mb 4101 and Mb 4202 are fitted with compact **Unimotor hd** servo motors. All other Mb Dynabloc are fitted with **Unimotor fm** flexible servo motors making them ideal for continuous duty applications with high inertia loads. Standard motor size for D+20 lead time is 3000 rpm.

Description	
Range	8 sizes from 4101 to 2601
Gearbox ratio	Ratios from 5 to 276
Nominal torque	24 to 750 N.m
Backlash	STANDARD : 10 to 30', depending on sizes and ratio
Lubrication	Life-lubricated with ISO 6743/6 synthetic oil, multiposition
Efficiency	Depending on ratios-see p.84 Technical Characteristics
Output shaft	Solid shaft + key - Tolerance of diameter: h6 - Key DIN 6883 Hollow shaft + key - Tolerance of diameter: H7 - Key DIN 6883
Unimotor fm Unimotor hd	Nominal speed 3000 rpm Connectors rotatable by 90° Incremental or absolute encoder Motor with or without brake Universal mounting with keyed shaft Unimotor hd: available for Mb41 and Mb42 gearboxes only
Finish	Painted (RAL 9005 black) (except Mb41, Mb42: unpainted aluminium)
